## ADVANTAGES

Since 1957 KLEIN Products has been a worldwide industry leader in manufacturing Water, Diesel and Lube tank bodies, including centrifugal pumps, valves, water cannons and related equipment. Our factories are state-of-the-art with methods of production designed to produce the highest quality tanks for the construction, mining and industrial industries. Klein consistently stays current with the latest proven technologies that enable us to continually produce high quality, cost-effective equipment that offers the best value, strength, reliability and durability. KLEIN tanks have been proven worldwide in the most extreme conditions of heavy construction and mining. No other competitively priced system offers the structural strength, durability and cutting-edge function ability that genuine KLEIN Products tank systems offer. Combine Klein's worldwide reputation for quality, low center of gravity Patented Trapezoid Design, PFC Baffling, flanged heads and baffles with our world-renowned component parts for the most technologically advanced, superior quality product available in its class.

- **Safety.** Klein, through years of experience in the harshest conditions in the World, created and patented a very low center of gravity Trapezoid Design Tank. Today, it is the safest and lowest center of gravity tank anywhere. Our **Patented Trapezoid Design** offers superior visibility to the driver, thus making their driving experience safer and more enjoyable. This Patented Trapezoid design is often requested by the largest Engineering Firms in the world for its safety aspects.
- **Strong Structure.** Klein is the only Tank Manufacturer in the World that manufactures tanks over 8,000-gallons using the Flanged Heads technique. This technique (folding each steel sheet and welding them inside and outside) is used for all size KLEIN tanks on-road and off-road, making the structure 5 to 10 times stronger than regular conventional welded tanks. Klein manufactures Water and Diesel tanks from 2,100-gallons (8,000-liters) up to 40,000-gallons (152,000-liters).
- **Baffles.** Our Klein Patented PFC-Precision Flow Control Transversal and Longitudinal Interior Baffling system limits the movement of liquid inside the tank; thus making the overall truck tank more stable. All Klein tanks use this safety internal baffling system.
- **Klein Original Parts.** Klein is a world leader manufacturer of water and fuel tank related parts; such as Pumps, Valves, Water Cannons, etc. Klein offers Next-Generation parts which are the strongest, most efficient and innovative parts anywhere. We have over \$5USD million in stocked parts any given day, so our dealers will be able to receive parts almost immediately.
- **Support Dept.** Klein employs several full time Engineers responsible to make sure we are the World Tank Leader in design, innovation and safety. We have several full-time staff exclusively available to our Export and Defense dealers. Klein has created step-by-step instruction videos in English and Spanish for tank kit installation as well as for maintenance procedures.
