

ON/OFF HIGHWAY TANK EQUIPMENT INNOVATIONS

Safety, Performance, Durability

There's no terrain too rugged for Klein Products on/off highway tank equipment. With a combination of safety features, structural strength, durability and on-the-job performance you can't find anywhere else; our on/off highway tanks are built to conquer even the most extreme water and fuel application environments.

- Patented TRAP tank shape (a Klein Products innovation) for dramatically improved safety, durability, stability and perfected weight distribution.
- Enhanced safety through increased visibility, a lower center of gravity, and improved stability.
- Designed and built with genuine Klein Products components developed to address the specific extreme challenges of water/fuel distribution in heavy construction, quarry and mining environments.
- Precision Flow Control (PFC) baffling system that allows maximum liquid output while maintaining complete load stabilization and movement control, maximizing strength and enhances safety.
- Innovated, field-tested and proven in most extreme working conditions for over 65 years.

Water Distribution – Model K

Fuel Distribution – Model KF

Upgrade your truck tank equipment – order your on/off highway tank equipment today!

TANK FEATURES

1. The field-tested and proven Klein Products spray head valve combination is designed specifically for heavy-duty use. Strong, functional, and easy to service and maintain, it is constructed of long-lasting, tough, non-corrosive aluminum alloy. It is also easily and fully adjustable for discharge direction, elevation, volume and pressure.
2. The TRAP tank shape provides an extremely low center of gravity for added stability as well as improved visibility around the truck. It is the industry's strongest, safest mobile tank system.
3. LED sealed light modules are rubber mounted, protected in steel box enclosures and are standard equipment on our on/off highway tanks.
4. Access ladder (optional) fully complies with safety authorities' design criteria for width, size, step clearance and configuration, and non-slip rungs. Access ladder. Folding design. Provides safe access.
5. Manhole access; open or sealed, with a removable galvanized safety screen option.
6. Work lights/rotating lights (optional).
7. The dramatically improved visibility facilitated with the TRAP tank design is demonstrated when looking in the rearview mirrors. This visibility significantly increases jobsite and operator safety.
8. Great for watering slopes, banks and stock piles — as well as firefighting and washing equipment — the strong and durable Klein Products water cannon (turret monitor) is remote controlled from a cab-mounted joy stick. It is adjustable to discharge anything from a water fog to a long-range stream of water.
9. Side spray discharges are located behind the cab and in front of the tank, and are fully adjustable for discharge elevation. They are ideal for narrow zone watering, side slopes, stock piles and heavy-grade watering applications.
10. PFC™ Precision Flow Control. Multiple rows of transverse and longitudinal baffles compartmentalize tank interior which mitigates material surge and maintains low CG while simultaneously providing superior tank strength, durability and longevity. Field tested and PROVEN design for over 65+ years.
11. Fenders. Fender weldments are heavy duty, flanged, formed and welded. Integrated into tank structure adding strength and low CG design. This super strong design, perfected over years and years of use in most severe, adverse terrain. Mud flaps included.
12. Water and fuel pumps Klein exclusive. Designed specifically for extreme conditions. Strong, functional and easy to maintain. These premium quality pumps are innovative, field tested and PROVEN.
13. Truck integration. All Klein tanks integrate seamlessly to existing truck circuitry. Computer, hydraulic and electrical. Our tank systems works utilizing your system features. We use only OEM, pin style connectors, no crimps, premium high quality hydraulic components, protected and securely routed.
14. Heavy duty bumper. Integrated into tank/truck design and built super tough, this weldment option provides great protection for rear of tank vehicle.
15. Controls. Cab interior or exterior mounted, as required. Ergonomic, easy to use, and easy to maintain. High quality material and components make the control module long lasting and durable.
16. Hose reels. High-quality discharge hose/reel. Various sizes and custom configured to your water/fuel discharging needs.
